An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al., 1998). cDNA cleaved with BamHI
and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et
al., submitted for publication) digested with BamHI and SalI. This
clone is in a modified pBluescript vector. Please visit our web
                                                                                                            RIKEN Genomic Sciences Center

The present sequence is a chlorophyllase protein coding sequence. The chlorophyllase protein coding sequence can be used for the transformation of a plant

Claim 3; Page 10-11; 21pp; Japanese.

DNA encoding chlorophyllase, useful for producing transgenic plants.

P-PSDB; AAB99102. WPI; 2001-338421/36.

The nucleic acid molecules and polypeptides of the invention may be useful in mediating tocopherol biosynthesis and in producing plants with increased drought resistance. The current sequence is that of the thale cress chlorophyllase 1 DNA of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Thale cress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   06-MAY-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

plant cell has been expose to these abiotic stresses. been exposed and

SEQ ID NO 158; 577pp + Sequence Listing; English

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      588
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    480
```

```
Novel isolated polynucleotide, useful for conveying pathogen resistance to plants, and for identifying plants infected with a pathogen.
Claim 3; SEQ ID NO 233; 605pp; English.
                                                                                                                                                                                                                 WPI; 2002-292409/33
```

The invention relates to 691 Arabidopsis thaliana genes (ADG87559).

CC ADG87557) whose expression is altered in response to pathogen infection, CC and to homologues of these genes from other plants or fungi, especially CC from maize, soybean, barley, alfalfa, sunflower, canola (oliseed rape), CC cotton, peanut, sorghum, tobacco, sugarbeet, rice or wheat. The CC expression of genes of the invention was upregulated or downregulated in CC indicating that they play a role in defence mechanisms. The genes of the CC invention are regulated by RPP7 or RRPB which act via unconventional CC signalling cascades, or by the RPP4-dependent pathway. The invention also CC relates to polypeptides encoded by the pathogen infection-related genes; CC promoter motifs from pathogen infection-related genes; CC plants and their progeny comprising a polynucleotide of identifying a plant cell infected with a pathogen. The cC polynucleotide sequences and methods of the invention are useful for c didntifying plants infected with a pathogen, and for conferring CC resistance to pathogens such as comycetes, fungi, bacteria, viruses, CC neamotodes and insects (e.g., aphids). The present sequence represents an Arabidopsis thaliana gene whose expression is altered in response to CC Peronospora parasitica infection. Note: The sequence data for this patent CC electronic format directly from WIPO at CC. ftp.wipo.int/pub/published\_pct\_sequences.

PT to plants, and for identifying plants infected with a pathogen.

XX

CC laim 3; SEQ iD NO 32; 605pp; English.

XX

The invention relates to 691 Arabidopsis thaliana genes (ADG87559-CC ADG87557)) whose expression is altered in response to pathogen infection,
CC and to homologues of these genes from other plants or fung; especially
CC from maize, soybean, barley, alfalfa, sunflower, canola (cilseed rape),
CC cotton, peanut, sorghum, tobacco, sugarbeet, rice or wheat. The
CC expression of genes of the invention was upregulated or downregulated in
CC Arabidopsis plants infected with the comycete Perconospora parasitica,
indicating that they play a role in defence mechanisms. The genes of the
CC indicating that they play a role in defence mechanisms. The genes of the
CC invention are regulated by RPP7 or RRP8 which act via unconventional so
CC relates to polypeptides encoded by the pathogen infection-related genes,
CC promoter motifs from pathogen infection-related genes (ADG88243-ADG88327)
CC expression cassettes, host cells and pathogen-resistant transgenic
CC plants and their progeny comprising a polynucleotide of the invention;
CC and a method of identifying a plant cell infected with a pathogen. The
polynucleotide sequences and methods of the invention are useful for
CC identifying plants infected with a pathogen, and for conferring
CC resistance to pathogens such as comycetes, fungi, bacteria, viruses,
CC neamotodes and insects (e.g., aphids). The present sequence represents an
Arabidopsis thaliana gene whose expression is altered in response to
CC peronospora parasitica infection. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC printed in the printed specification, but was obtained in

cold, heat, drought, heats, for conferring drought, herbicides, extreme osmotic conditions, conferring increased resistance to plant disease, pathogens or for or

SEQ ID NO 26342; 15pp; English.

The invention describes a recombinant DNA construct comprising a conjunct consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at the invention are also useful in physical arrays of molecules and as comproving plant tolerance to cold, heat, drought, herbicides, extreme commotic conditions, pathogens or pests, for manipulating growth rate in commotic conditions, pathogens or pests, for manipulating growth rate in colls by modification of the cell cycle pathway, for conferring conditions in plant disease, for producing galactomannan, constructed in the recombination of the cell cycle pathway, for conferring condition or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of composition of plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert conjuncted that can be used in the recombinant DNA construct of the

The invention relates to plant chlorophyllase (EC 3.1.1.14) proteins and polynuclectides encoding such proteins. Chlorophyllase enzyme is involved in chlorophyllase enzyme is involved in chlorophyllase enzyme is involved in chlorophyllase enzyme is plant cell senescence. Sequences of the invention are used to produce a plant by transforming a plant cell with chlorophyllase and regenerating a plant from the transformed plant cell. They may also be used to transform cells. The plants that are produced can have economical importance as they can allow for the controlled induction or postponement of senescence. The present sequence is grape chlorophyllase cDNA from vdblc.pk002.pl9:fis clone

Chlorophyllase enzyme is involved in chlorophyll degradation in plant cell senescence. Sequences of the invention are used to produce a plant by transforming a plant cell with chlorophyllase and regenerating a plant from the transformed plant cell. They may also be used to transform cells. The plants that are produced can have economical importance as they can allow for the controlled induction or postponement of senescence. The present sequence is soybean chlorophyllase cDNA from sfl1.pk0046.f8 clone

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to plant chlorophyllase (EC 3.1.1.14) proteins and polynucleotides encoding such proteins. Chlorophyllase enzyme is involved in chlorophyll degradation in plant cell senescence. Sequences of the invention are used to produce a plant by transforming a plant cell with chlorophyllase and regenerating a plant from the transformed plant cell. They may also be used to transform cells. The plants that are produced can have economical importance as they can allow for the controlled induction or postponement of senescence. The present sequence is wheat chlorophyllase cDNA from wleln.pk0058.a4:fis clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      used to produce transformed postponement of senescence.

The invention relates to plant chlorophyllase (EC 3.1.1.14) proteins and polynuclectides encoding such proteins. Chlorophyllase enzyme is involved in chlorophyll degradation in plant cell senescence. Sequences of the invention are used to produce a plant by transforming a plant cell with chlorophyllase and regenerating a plant from the transformed plant cell. They may also be used to transform cells. The plants that are produced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Soybean;

The invention relates to plant chlorophyllase (EC 3.1.1.14) proteins and polynucleotides encoding such proteins. Chlorophyllase enzyme is involved in chlorophyllage enzyme is involved in chlorophyllage enzyme is involved in chlorophyllage enzyme is involved chlorophyllase enzyme is plant cell senescence. Sequences of the invention are used to produce a plant by transforming a plant cell with chlorophyllase and regenerating a plant from the transformed plant cell. They may also be used to transform cells. The plants that are produced can have economical importance as they can allow for the controlled induction or postponement of senescence. The present sequence is soybean chlorophyllase cDNA from sl2.pkl30.fl5:fis clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 An isolated polynucleotide encoding a plant chlorophyllase polypeptide, used to produce transformed plants that have controlled induction or postponement of senescence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2002-444102/47

The invention relates to plant chlorophyllase (EC 3.1.1.14) proteins and polynucleotides encoding such proteins. Chlorophyllase enzyme is involve in chlorophyll degradation in plant cell sensescence. Sequences of the invention are used to produce a plant by transforming a plant cell with chlorophyllase and regenerating a plant from the transformed plant cell. They may also be used to transform cells. The plants that are produced can have economical importance as they can allow for the controlled induction or postponemant of sensescence. The present sequence is tulip chlorophyllase cDNA from etplc.pk005.d16:fis clone. (Updated on 07-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                          An isolated polynucleotide a used to produce transformed postponement of senescence.
                                                                                                                                                                                                                                                     Claim 5; Page 56-57;

                                                                                                                       The invention relates to plant chlorophyllase (EC 3.1.1.14) proteins and polynucleotides encoding such proteins. Chlorophyllase enzyme is involved in chlorophyll degradation in plant cell senescence. Sequences of the invention are used to produce a plant by transforming a plant cell with chlorophyllase and regenerating a plant from the transformed plant cell. They may also be used to transform cells. The plants that are produced can have economical importance as they can allow for the controlled induction or postponement of senescence. The present sequence is grape chlorophyllase cDNA from vrllc.pk008.021:fis clone
                                                                                    Sequence 1216 BP;
                                                                                                                                                                                                                                                                                                                                              Claim 5;
                                                                                                                                                                                                                                                                                                                                                                                    An isolated polynucleotide encoding a plant chlorophyllase polypeptide, used to produce transformed plants that have controlled induction or postponement of senescence.
